## Transport Infrastructure Ireland - Energy Policy

Transport Infrastructure Ireland, TII, is committed to the application of sustainability principles in fulfilling its mission. These principles include the commitment to:

- Provide effective, efficient, and equitable mobility.
- Enable safe and resilient networks and services.
- Collaborate for a holistic approach.
- Deliver end-to-end improvements.
- Transition to net zero.
- Create total value for society.

These commitments are set out in TII's Sustainability Implementation Plan and underpin this TII Energy Policy. TII is also committed to meeting the energy efficiency and decarbonisation targets set by government under the Climate Action Plan and has developed the TII Climate Action Roadmap to support the achievement of these targets.

TII will endeavour to ensure good energy management practice across the full range of energy consuming activities which contribute to the fulfilment of TII's mission. TII will pursue progress through:

- embedding energy management principles in TII's decision making at all levels;
- proper management of those activities which are managed directly by TII; and
- collaboration with organisations to which management of such activities is entrusted under contract or statute.

More particularly, in the same wide context of all energy consuming activities of relevance to the fulfilment of TII's mission, TII is committed to:

- satisfying energy related statutory and regulatory requirements applicable to TII;
- supporting consideration of energy performance and carbon footprint in design, specification, and procurement activities;
- supporting the efforts of local authorities in the context of the application of funding allocated by TII;
- adopting and promoting the adoption of international best practice through the application of principles set out in ISO 50001: 2018 Energy management systems – Requirements with guidance for use;
- ensuring the availability of information and resources necessary to achieve related objectives; and
- ensuring continual improvement in TII's energy performance and in TII's Energy Management System.

This policy will be communicated to all TII staff and will be reviewed annually and revised as may be appropriate.

Peter Walsh
